

Backend Developer (Node.js)

Node.js backend developer with strong experience building RESTful APIs, authentication systems, payment integrations, and scalable backend architectures using Express.js and MongoDB. Experienced in building real-world e-commerce systems including cart systems, order management, Paystack payment integration, and secure webhook handling. Comfortable collaborating with frontend teams and delivering production-ready APIs.

Technical Skills

Backend	Node.js, Express.js, REST API Design
Database	MongoDB, Mongoose
Authentication	JWT Authentication, Role-Based Access Control
Payments	Paystack Integration, Payment Verification, Webhooks
Frontend	HTML5, Tailwind CSS, JavaScript
Tools	Git, Postman, Cloudinary, Multer, Axios

Key Projects

- **AgroBridge Marketplace API** – Built a full backend for an agricultural marketplace where farmers upload products and customers purchase them. Implemented product management, cart system, order creation, and secure Paystack payment processing.
- **Secure Payment System** – Designed payment architecture including order creation, Paystack initialization, payment verification, and webhook security to prevent fraud.
- **E-commerce Cart & Order System** – Implemented dynamic cart management (add, remove, update quantity) with MongoDB persistence and order generation from cart items.
- **Role-Based Authentication System** – Built authentication with JWT tokens supporting role-based access (customer, farmer, admin) and protected API routes.

Core Backend Strengths

- Designing scalable REST APIs using Node.js and Express
- Building production-ready MongoDB schemas with Mongoose
- Secure authentication and authorization systems
- Payment gateway integration and transaction verification
- Debugging API errors and optimizing backend performance
